 Riyadh, Saudi Arabia  Jordanian  June 30, 2003

Summary

Detail-oriented Computer Engineering graduate with a focus on high-performance system architecture and network infrastructure. Proficient in low-level protocol analysis and hardware-software integration. Seeking to leverage technical troubleshooting skills and a deep understanding of system optimization to maintain and scale robust network environments.

Professional Experience

Ebtikar Technology Company Network Engineering Intern

01/2024 – 02/2024
Riyadh, Saudi Arabia

- **Network Infrastructure Analysis:** Observed and analyzed the physical architecture of enterprise data centers, gaining insight into industrial cabling standards and high-availability server layouts.
- **Protocol Analysis & Diagnostics:** Utilized Wireshark to capture and inspect real-time network traffic, providing technical insights into packet flow and potential system bottlenecks.
- **Device Configuration Basics:** Gained hands-on experience with Cisco IOS, performing administrative tasks on Cisco ISR series routers including hostname setup, interface settings, and IP addressing.
- **Security & Remote Management:** Studied the implementation of Access Control Lists (ACLs) and the configuration of SSH to ensure secure, encrypted remote administrative access.

Education

Bachelor of Science in Computer Engineering TED University

12/2021 – 01/2026
Ankara, Turkey

- **Core Engineering Competencies:** Successfully completed 136 academic credits (247 ECTS) in Computer Engineering, achieving AA grades in Artificial Intelligence and both semesters of the Senior Design Project.
- **Senior Project (IoTGuard):** Designed and implemented an AI-powered Intrusion Detection System for IoT environments using LightGBM, Scikit-learn, and Raspberry Pi edge capture.
- **Secondary Field in Sociology:** Completed a minor in Sociology, maintaining high performance (AA/BA) in social theory and research modules to bring a multidisciplinary perspective to technical problem-solving.
- **Relevant Coursework:** Developed a strong technical foundation in Computer Networks, Operating Systems, Software Engineering, and Database Systems.

Projects

IoTGuard: AI-Powered Intrusion Detection System (IDS)

09/2025 – 12/2025

- **Advanced ML Architecture:** Designed and implemented a hybrid detection engine combining supervised (LightGBM) and unsupervised (IsolationForest) models to identify both known signatures and zero-day anomalies.
- **Real-Time Data Pipeline:** Engineered a high-throughput pipeline that tails Suricata IDS logs, performing rolling-window feature extraction (13 features) every 10–30 seconds for live traffic scoring.
- **Explainable AI (XAI):** Integrated SHAP (SHapley Additive exPlanations) to provide transparent, per-alert interpretability, allowing administrators to understand the specific traffic features triggering a detection.

Technical Skills

- | | | | |
|-------------|-----------------------|---|---------------------|
| • Cisco IOS | • Java | • Intrusion Detection Systems (IDS) | • Operating Systems |
| • Flask | • Python (ML/Backend) | • Network Architecture and Segmentation | • Wireshark |
| • MongoDB | • C Programming | • Embedded Systems Design | • SQL |
| • Node.js | | | |

Soft Skills

- Critical & Analytical Thinking
- Project Management & Teamwork
- Personal & Professional Development

Languages

- Arabic: Native
- English: Fluent
- Turkish: Basic
